

ACMUA CONSERVATION TIPS

QUICK TIPS

Reduce usage by 65% and use a commercial car wash instead of washing your car at home. Avoid if possible.

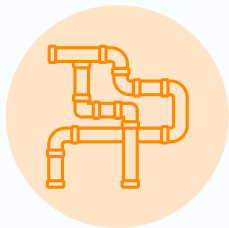

Raise lawnmower blades to at least three inches to promote deeper grass roots, which hold water better.

Postpone water intensive yard work like reseeding your lawn until conditions improve.

Install low-flow shower heads, faucets, and toilets. As well as take shorter showers and turning water off while brushing teeth.

Fix leaks around your home and with your irrigation system.

Run your washing machine and dishwasher only when full.

Voluntary water conservation now can help to avoid more serious and restrictive measures in the future.
